

DNR GNSS Guidebook Questionnaire

DNR Survey Advisory Board

February 2024

In order to make the DNR GNSS Guidebook a true, practical user reference, the DNR Survey Advisory Board is asking for your following input:

1. Provide a detailed example of under what circumstances one is using GNSS. For example, locating Right of Way monumentation within road right of ways.

2. What type of accuracy are you expecting to receive.

With your input information we plan to include as many of these scenarios in the Guidebook, as space will allow, and provide the proper procedures to use in order to achieve the desired accuracy.

Your input is very important to us. Either fill in the questionnaire at the time of the conference and submit to the DNR booth in the Exhibit Hall or submit by email to

Bob Morse, PLS
